

# Dentons Flashpoint

## Daily Global Situation Report

July 29, 2020

# Global Situation Update: July 29, 2020

---

## KEY TAKEAWAYS

The US Fed will extend emergency lending programs to end of 2020.

The EU imposed sanctions on China over its treatment of Hong Kong.

Europe gears to contain migrants from Africa amid fears of the spread of COVID-19 infections.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Global

---

**Overnight, confirmed coronavirus cases grew to 16,917,714 in 213 countries and territories, with 663,942 deaths.**

- The International Air Transport Association downgraded its recovery forecast, warning that **air traffic** will not return to pre-pandemic levels until 2024.
- Sources say Moderna is pitching its virus **vaccine** at around \$50 to \$60 per course, higher than alternatives from Pfizer and BioNTech.

# Markets

---

## The US Federal Reserve extended emergency lending programs until the end of the year.

- Wednesday, **European stocks** remained even, ahead of a US monetary policy decision.
- **Chinese stocks** closed higher while **Japan's Nikkei** closed down.
- On Tuesday, **US stocks** closed lower as another set of Q2 earnings reports shook investor confidence.
- **Energy shares** fell alongside crude prices.
- Payments over **Visa networks** fell 10 percent in Q2 but show signs of improving.
- Shares in **Barclays** were among the worst performers in Europe, dropping 4.7 percent after the U.K. bank reported a 91 percent slump in second-quarter profit.
- Earnings at major U.S. companies have so far beaten the **gloomy expectations** of analysts. Just over a third of firms on the S&P 500 had reported through Tuesday and posted a 38 percent decline in earnings per share on average from a year before.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Business

---

## Barclays added a further £1.6bn to its reserves for bad loans in the second quarter, adding clarity to the scale of the damage coronavirus could wreak on Britain's banks.

- **Amazon** began selling protective face shields. **Ebay** added 8m shoppers in Q2.
- **Harley-Davidson** reported its first quarterly loss in 10 years; Starbucks reported its first loss in 7 years. **McDonalds** reported its lowest quarterly profit in 13 years. **3M** Q2 sales underperformed analysts' expectations. Cigarette maker **Altria** raised its dividend and reinstated its full-year guidance after seeing net H1 revenues. Miner **Rio Tinto**, the world's largest producer of iron ore, announced plans to pay \$2.5bn dividend, as the company reported \$4.75 H1 earnings.
- **Pfizer** increased its full-year guidance as sales of cancer and cardiac drugs rose.
- **Victoria's Secret** owner L Brands plans to lay off 15 percent of its corporate staff.
- Peugeot owner PSA assessed that carmakers need to take radical steps to lower the price of **electric vehicles** by cutting costs across offices, dealerships and suppliers, in order to reduce development and sales costs to make them more affordable to consumers.
- Eurozone's largest retail bank **Santander** reported a €11.1bn loss in Q2. **Deutsche Bank** increased its forecast for revenue this year after it posted the strongest surge in fixed-income trading revenue in almost eight years, more than offsetting €761m of coronavirus-related loan loss provisions.
- **FedEx** pilots called on the cargo company to suspend operations to Hong Kong after claiming that they were subject to "*unacceptable risks*" under the city's tightened coronavirus restrictions on air crew.
- **AMC and Universal Pictures** announced a deal to shorten the window during which films will appear in theaters before going to online streaming.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Africa

---

- US Africa Command said one civilian was killed and three injured in a February US airstrike on **Somalia**, the second such admission since it launched quarterly reports on civilian casualties.
- **Kenya** banned the sale of alcohol in restaurants and closed bars after cases doubled over the past three weeks.
- An independent inquiry cleared the president of the **African Development Bank** of alleged misconduct.
- ECOWAS leaders called for the quick formation of a unity government in **Mali** and threatened sanctions against those opposing an end to the crisis.
- **South Sudan** missed a deadline to form a new parliament.
- **Madagascar** registered over 10,000 confirmed virus cases, while **Angola** reached 1,000 cases.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Africa

## African Coronavirus Death Toll

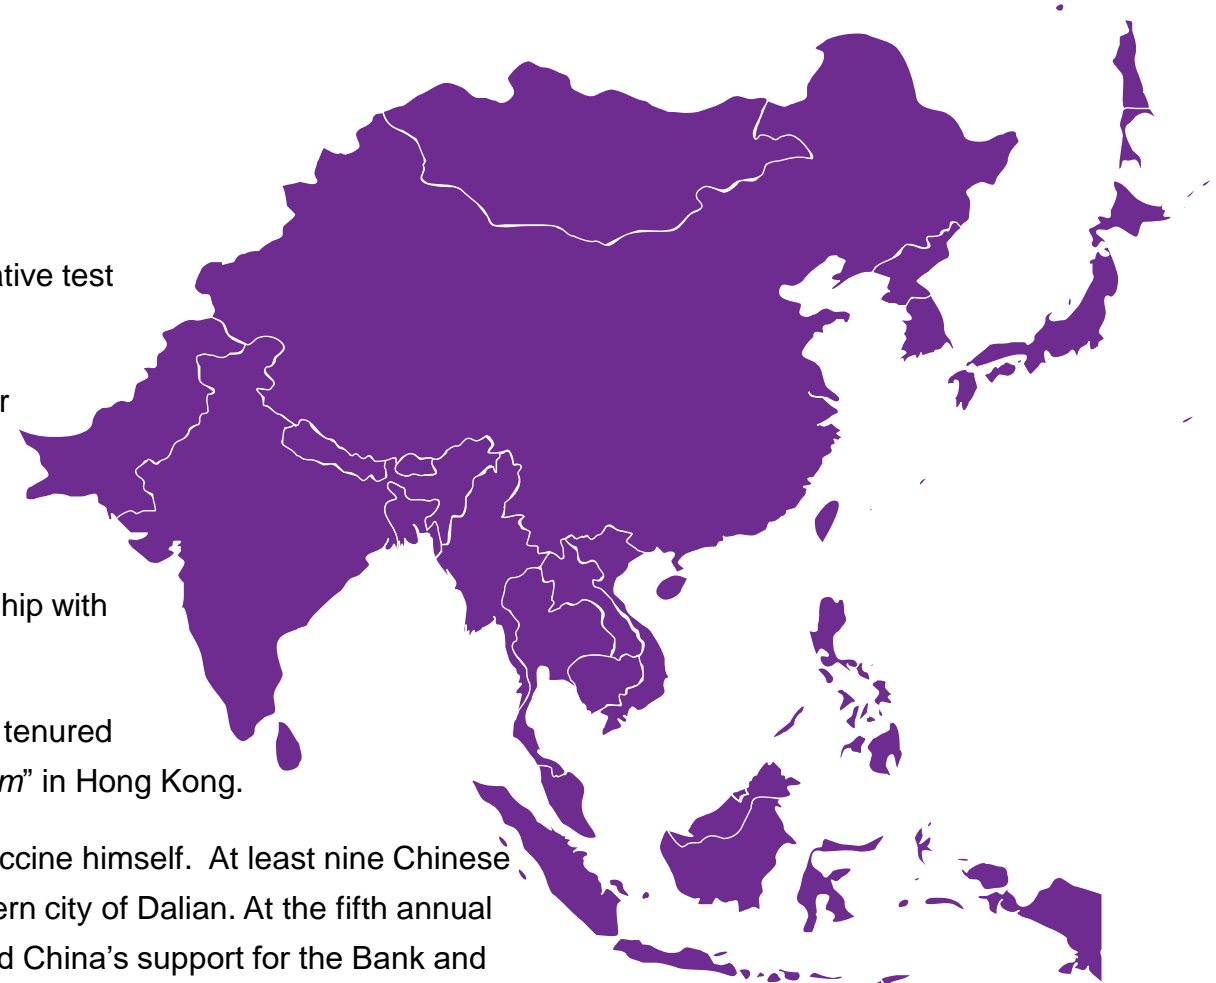

Countries	Mortality				Countries	Mortality				Countries	Mortality			
	Confirmed	Deaths	Deaths/1M	(%)		Confirmed	Deaths	Deaths/1M	(%)		Confirmed	Deaths	Deaths/1M	(%)

# Asia

- Fake coronavirus test scandals in **Bangladesh** have sparked mistrust of negative test certificates..
- After being convicted on corruption charges, **Malaysia's** former Prime Minister Najib Razak was sentenced to 12 years in prison.
- The **Vietnamese** outbreak spreads to Hanoi and Ho Chi Minh City.
- Following talks with **US** officials, **Australia** vowed to deepen defense partnership with the **US**, but says it has “*no intention of injuring*” its relationship with China.
- The University of **Hong Kong** fired pro-democracy activist Benny Tai from his tenured associate professor position; Tai called the move “*the end of academic freedom*” in Hong Kong.
- **China's** head of disease control said that he had received an experimental vaccine himself. At least nine Chinese cities have reported coronavirus cases linked to the outbreak in the northeastern city of Dalian. At the fifth annual conference of the Asian Infrastructure Investment Bank, President Xi reiterated China's support for the Bank and commitment to multilateralism and global ambitions. China's first dedicated environmental fund has raised \$12.59bn in its first phase, per the environment ministry
- Floods caused by heavy monsoon rains have displaced or affected 8 million in **India's** two poorest states since May. An Indian study has discovered that 57 per cent of residents in Mumbai's slums have antibodies indicating past exposure to Covid-19, a sign of how the virus has spread through the city's cramped informal settlements.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Europe

---

- The **European Union** imposed sanctions on China over its treatment of **Hong Kong**; the sanctions include limiting exports of equipment **China** could use for repression and reassessing extradition arrangements.
- Reports of harassment against women, minority, and left-leaning **Germans** have raised fresh debate about the presence of far-right influence in security forces.
- **Italy** plans to hold the Venice Film Festival in September, despite ongoing travel bans for non-EU countries.
- **France** uncovered 1,400 cases of suspected fraud in its furlough scheme. The French government has launched an initiative to reshore the production of critical medicines back to Europe to protect fragmented supply chains.
- The president of **Belarus** reported that he has tested positive for the coronavirus but is asymptomatic.
- The **Turkish** lira dropped to its lowest level against the dollar since May on Tuesday, even as authorities spent about \$2bn to prop it up. Turkey announced it would continue with plans to reopen schools on August 31 as long as daily case counts continue to decline.
- The **Italian** government will send soldiers to Sicily to stop recently arrived migrants from **Tunisia** from leaving holding centers after a raft of breakouts in recent days amid fears that migrants might be spreaders of COVID-19. **Malta** reports that two-thirds of rescued migrants from on boat from **Libya** tested positive for the virus.
- **UK** businesses have borrowed over £50bn to date to weather the pandemic. The UK strikes a deal for 60 million COVID-19 vaccine doses with Sanofi and GSK.

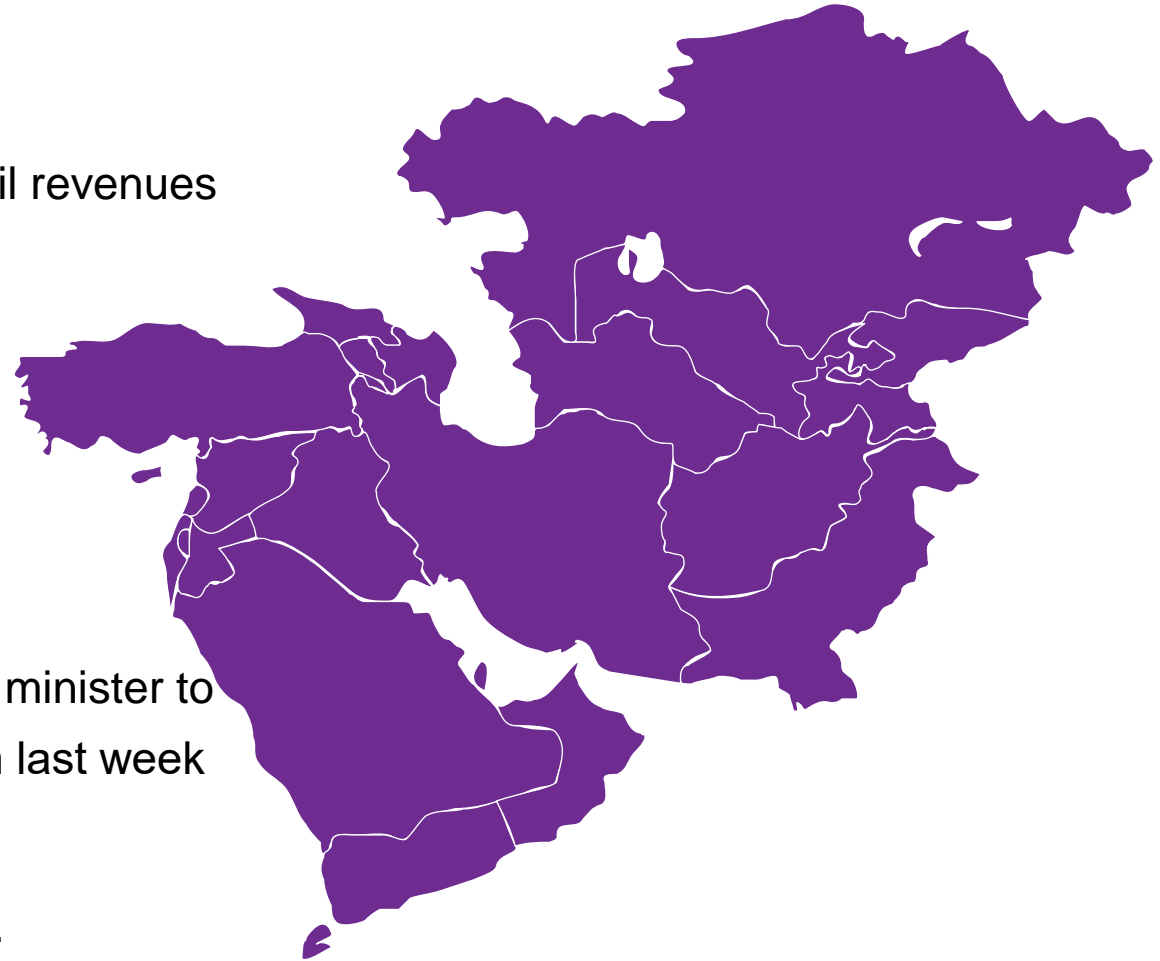

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Middle East

---

- **Saudi Arabia** posted a Q2 budget deficit of \$29bn as oil revenues declined 45 percent year-on-year.
- **Iran** reported its single highest daily death toll since the onset of the pandemic with 235 deaths in 24 hours.
- The Taliban announced an Eid al Adha ceasefire in **Afghanistan**.
- **Tunisia's** president Saied appointed the former interior minister to be prime minister, following the former PM's resignation last week amid accusations of corruption.
- **Morocco** closed eight northern cities amid virus spikes.
- **Pakistan** reported 275,000 confirmed coronavirus cases.

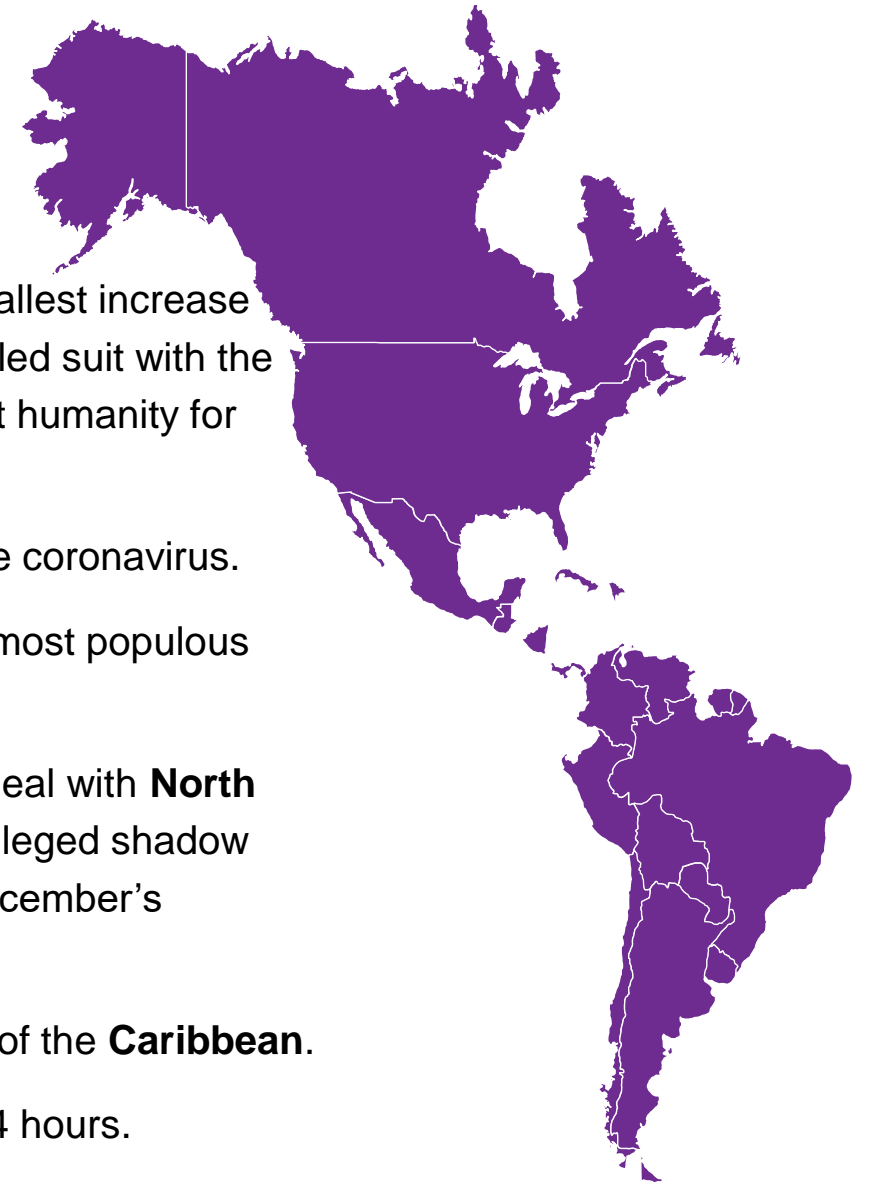

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Americas

---

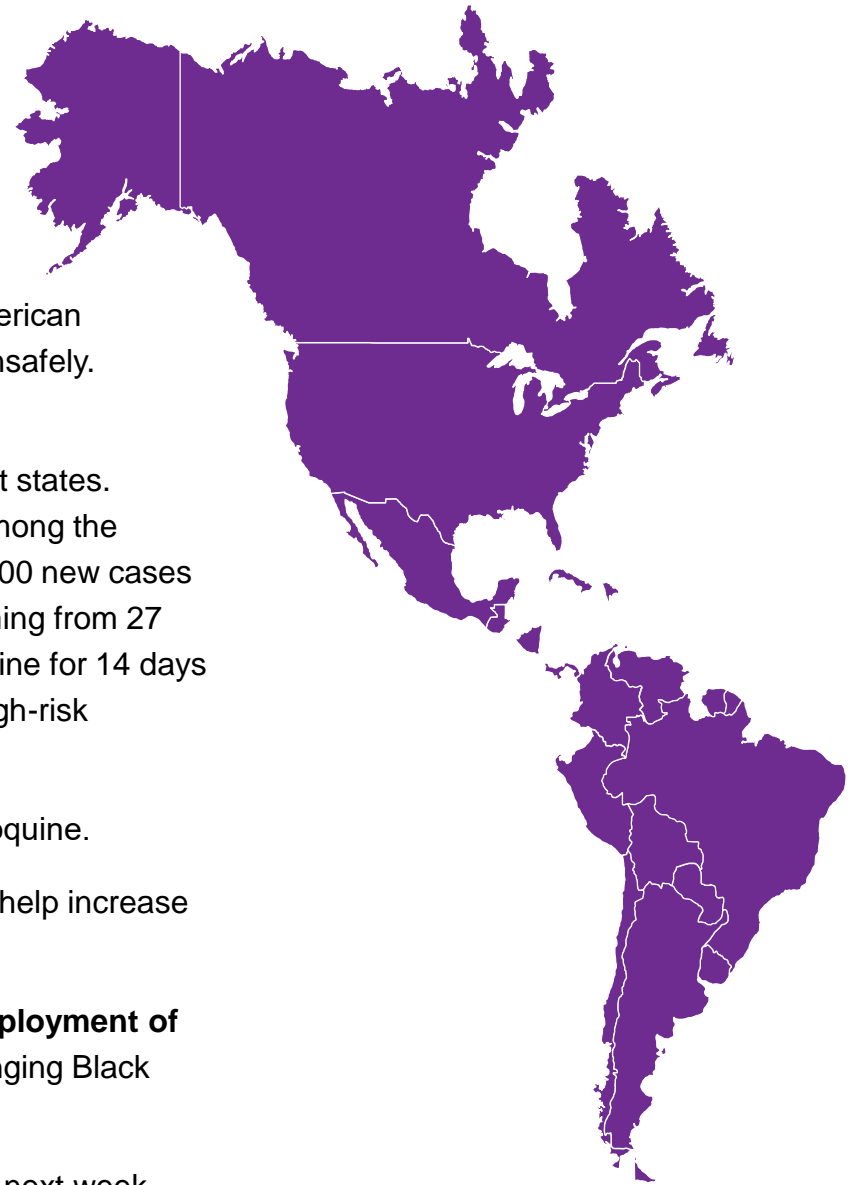

- The **Brazilian** economy lost 1.2m formal jobs in H1, with June seeing the smallest increase in job losses. An umbrella group of Brazilian unions and social groups have filed suit with the International Criminal Court to accuse President Bolsonaro of a crime against humanity for neglect in combating the coronavirus.
- The Mayor of Medellin, **Colombia's** second largest city, tested positive for the coronavirus.
- The death of an inmate from COVID-19 prompted rioting in four of **Bolivia's** most populous prisons.
- UN investigators warned **Venezuela** that a possible military and technology deal with **North Korea** may be in breach of UN sanctions. Venezuela's opposition, who are alleged shadow allies of President Maduro, are reportedly struggling to find candidates for December's congressional election.
- Forecasters issued a tropical storm warning for **Puerto Rico** and other parts of the **Caribbean**.
- **Mexico** reported over 400,000 confirmed virus cases, 7,208 just in the last 24 hours.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Americas: US

- Ohio's largest school district delayed reopening and will remain online until late October. The American Federation of Teachers advocated a teachers' strike "as a last resort" if **schools** are reopened unsafely. Arizona teachers protested for better safety measures ahead of school reopenings.
- Top epidemiologist Dr. Fauci warned that the **Midwest** could soon see the same surge as sunbelt states. Yesterday, **Missouri, Oklahoma and Idaho** registered 7-day percent averages for new cases among the highest in the US. **Florida** reported a record one-day rise in deaths but recorded fewer than 10,000 new cases for the third day in a row. **District of Columbia** Mayor Muriel E. Bowser announced travelers coming from 27 coronavirus hotspots, including **Florida, Ohio, Georgia and California**, will need to self-quarantine for 14 days upon arriving in the District; **Maryland and Virginia** have been exempted despite meeting the high-risk classification terms.
- **Twitter** ordered President Trump's son to delete a misleading video on the uses of hydroxychloroquine.
- Kodak won a \$765m government loan under the **defense production act**, the first of its kind, to help increase US capacity to produce drugs domestically.
- In a House Judiciary Committee hearing, Attorney General William Barr defended the **federal deployment of troops** across the US. The organized political activity of **armed conservative groups** in challenging Black Lives Matter protests increases **fears of violence** on the streets of America.
- Democratic presidential candidate Biden announced he will select a **running mate** by the end of next week.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# US Protests Update: Federal Agents in US Cities

**The potent combination of heightened political and racial tensions, a looming presidential election, tensions between local and federal governments, and outrage from protestors over the presence of federal officers has created a situation ripe for continued escalation.**

In the two months since George Floyd was killed by Minneapolis police officers, nationwide protests originally sparked by his death have entered a new cycle of escalation, which some have called the “*second wave*” of unrest. The deployment of federal officers to US cities, starting in Portland, has reignited tensions between protestors and authorities, in some cases prompting protests to grow larger than ever before while exacerbating tensions between local and federal governments. Although the Black Lives Matter movement remains at the heart of protests, many activists have also expressed frustration that conflict with federal agents has distracted from focus on racial injustice. The potent combination of heightened political and racial tensions, a looming presidential election, tensions between local and federal governments, and outrage from protestors over the presence of federal officers has created a situation ripe for continued escalation.

Portland has emerged as the epicenter of the new wave of protests. Starting on July 4<sup>th</sup>, federal agents were sent to Portland to guard federal

buildings targeted by protestors. While city leaders say that demonstrations were largely peaceful and winding down before July, the Justice Department maintains a different narrative, saying that “*Portland has seen over 50 straight nights of criminal violence perpetrated by anarchists targeting city and federal properties and those that inhabit them.*” The arrival of federal officers reignited protests and drew national attention. Portland Mayor Ted Wheeler, who had previously criticized the protest’s destructive tactics, turned to objecting the presence of federal agents, and even joined protestors last week, only to be teargassed himself. The forceful tactics of federal agents have caused widespread alarm across the country. Reports and videos show agents firing on protestors with rubber bullets and exploding pepper balls, as well as using stun grenades and tear gas on crowds. Accounts of protestors being detained and removed in unmarked vehicles have raised alarm and outrage across the country. Oregon Governor Kate Brown has called the actions against demonstrators a “*blatant abuse of power;*” Mayor Wheeler called them “*an attack on our democracy.*”

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# US Protests Update: Federal Agents in US Cities

The federal officers now in the streets of Portland and other US cities come mainly from US Customs and Border Patrol (CPB), the US Marshalls Service, and the Federal Protection Service. Agents have been criticized for failure to clearly identify themselves, contributing to fear from protestors and prompting DC legislators to propose new requirements for ID badges. Federal agencies have resisted calls for personal identification of officers, citing “doxing” (publicizing addresses and other personal information online) and other targeting incidents against federal law enforcement officers. Public figures across the political spectrum have raised concerns about the suitability of different units of federal officers to respond to protests across the country. For example, when members of CBP’s Bortac (Border Patrol Tactical Unit) were sent to Portland, critics, including a former head of the CBP, objected that a squad specially trained for conducting border raids and tracking smugglers is an overly militarized response to handle unarmed civilians.

While Portland remains the epicenter of clashes between demonstrators and federal agents, both protests and deployment of federal agents, at the direction of the Trump Administration, are spreading across the country. Over the weekend, protests grew across other US cities including Los Angeles, Seattle, and Omaha. In an interview this Sunday, Seattle Mayor Jenny Durkan explained that

*“there is no question that the actions in Portland have escalated things, not just in Seattle, but nationwide.”* President Trump has pledged an additional “surge” of federal security forces across US cities to crackdown on crime and violent protests. Along with sending more federal officers to Portland, the Trump Administration has sent or threatened to send federal officers to a number of cities under Democratic leadership, including Kansas City (Missouri), Chicago (Illinois), Albuquerque (New Mexico), Seattle (Washington), and Oakland (California). On Monday, the Democratic mayors of Portland, Chicago, Seattle, Albuquerque, Kansas City, and Washington DC sent a letter to Congress calling for legislation to *“make clear that these actions are unlawful and repugnant.”* This week, a group of protestors sued the Trump Administration for what they describe as the out-of-control response of federal agents in a federal DC court, following failed legal efforts by the state of Oregon. Many activists have raised alarms that an increasingly militarized response to protestors will be more dangerous in cities which, unlike Portland, have large minority communities that have been historically subject to disproportionate police violence.

Controversy over the federal response has played out in Washington as well. Related measures have popped up in multiple appropriations bills

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# US Protests Update: Federal Agents in US Cities

in recent weeks - for example, the House version of the omnibus National Defense Authorization Act, passed last week, included a measure limiting the sale of excess military-grade equipment to local police departments.

The Senate defeated a similar amendment, as well as measures introduced by Oregon's lawmakers to end the "*paramilitary cooperation*" in Portland and require federal agents to identify themselves before making an arrest. Beyond impacting legislative agendas, the actions of federal agents have become a centerpiece debates around the 2020 elections, as President Trump faces widespread accusations of using the deployment of federal agents in the interest of his own re-election.

The issue of President Trump's re-election agenda featured prominently at Tuesday's House Judiciary Hearing, in which Attorney General William Barr defended the federal law enforcement response in his first ever testimony to the body. Barr expanded upon what he views as a "*breakdown of law and order*", explaining that the federal response is targeted at an upswing in violent crime that has been exacerbated by the alienation of police. The protests represent another breakdown of law and order, as Barr believes "*violent rioters and anarchists have hijacked legitimate protests*" about racial injustice. In response, Democratic Chairman Nadler accused Barr of acting "*not to combat*

*violence crime, but to help with the President's re-election efforts,*" and pressed him to stop the Justice Department from using federal agents as "*props*" in President Trump's campaign. Other Democratic members accused President Trump of attempting to divert attention from his mishandling of the coronavirus pandemic. Images of protests and unrest have featured prominently in the Trump campaign's messaging, fueling accusations that the President is not interested in de-escalation.

Black Lives Matter is a movement that has captured the attention of Americans in a way unseen since the Civil Rights movement of the 1960s. Racial injustice is a crosscutting issue, not neatly assigned to one side or the other of the political aisle. Freedom of speech and non-violent protest is protected under US law and is a basic tenet of American democracy. Violent protest and militarized policing are not scenes Americans expect to view on US streets. While there is a great deal of soul searching among Americans on the pressing social issues of race and justice, assigning responsibility for the violence is being politicized. If these confrontations were happening outside the US, Washington's response would be to call for an end to violence, the need to respect free speech and engage stakeholders to cooperate to de-escalate and resolution of the disputes. This is sound advice; the US should take it.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Science under the Scope: Low Morbidity and Mortality Rates in Africa

*Contributed by the Scowcroft Institute of International Affairs*

***Several hypotheses seek to explain the unexpectedly low morbidity and mortality rates in African countries, such as a low seeding rate; effective mitigation measures; favorable weather; prior exposure to disease; or, most favored, the continent's young population.***

Seven months into the COVID-19 pandemic scientists and policymakers have made extraordinary gains in understanding the virus. Despite such advances, several elements of the pandemic remain a mystery. One such element is low morbidity and mortality rate on the continent of Africa. Even the worst hit countries have lower case numbers and lower deaths than their European and American counterparts. What is intriguing about the outcomes in Africa thus far in the pandemic is that they are the opposite of what many predicted would happen once the virus reached the continent. Many pandemic experts were concerned that many African countries would suffer high case fatality rates because of weak healthcare systems, inadequate surveillance and laboratory capacity, and an overall lack of

resources for public health (1). This has not proven to be the case so far.

Although the reasons for the low morbidity and mortality rates in African countries is not known with certainty, there are several hypotheses that seek to explain the outcome. The first of these is the suggestion that Africa has a low seeding rate (2). Supporters of this hypothesis argue that travel restrictions and other disruptions caused by the COVID-19 pandemic has led to a smaller number of cases importing to African countries. With a low seed rate, it is argued, the virus has not taken hold in Africa the way it has on other continents.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Science under the Scope: Low Morbidity and Mortality Rates in Africa

Another hypothesis is that many African countries have taken effective mitigation measures, which has kept the number of cases and deaths low (3). Supporters of this hypothesis argue that WHO-supported structures and lessons from Ebola outbreaks have helped countries respond more effectively to COVID-19 than other parts of the world. One group of experts has stated, "...local expertise gathered from previous outbreaks and centralized public-health infrastructure with a clear action plan, in addition to a favorable demographic structure and climate, have put many countries in the continent in good standing to face this epidemic head on." (4) In essence, Africa's extensive experience with epidemics could be an advantage, despite a weak healthcare infrastructure.

A third hypothesis for why Africa is experiencing low morbidity and mortality is favorable weather. Africa has an average climate that is warmer and drier than many areas of the world and this could decrease transmissibility of the virus (5). It should be noted, however, that weather has not appeared to play a significant role in other areas of the world. For example, the average in Arizona in

July is 106 degrees Fahrenheit and they have averaged 3,000-4,000 cases per day for most of the month (6).

Some have also hypothesized that the prior exposure to coronaviruses among people living in Africa could be contributing to the lower case and death numbers (7). Recent studies of T cell immunity have shown that there may be cross-reactive immunity between SARS-CoV-2 and other human coronaviruses (8). There is also growing evidence that other strains of coronavirus that are closely related to human coronaviruses exist in bat populations in Africa and Asia (9). Individuals living in Africa could have been exposed to these similar strains, providing them immunity from SARS-CoV-2.

The final and most widely supported hypothesis is that morbidity and mortality is lower in Africa because the continent has a young population. The median age in Africa is less than 20 years, whereas the median ages in Europe and the United States are over 38 years (10).

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Science under the Scope: Low Morbidity and Mortality Rates in Africa

---

Sixty-five percent of Africans are under the age of 25 (11) and only 3 percent of Africans are over the age of 65 (12). Additionally, 44 percent of the population of Nigeria, Africa's most populous country, are under the age of 15 (13). Given that younger people experience less severe infection from COVID-19, and some experience no symptoms at all, this could be a primary reason for the low number of cases.

It is yet to be seen how high rates of comorbidities will affect case fatality rates in Africa going forward. So far they have had little impact, but the continent has high rates of HIV and noncommunicable diseases that are known to increase the severity of COVID-19 infection (14). There are also high rates of smoking on the continent, another factor suspected to increase severity. Due to these underlying conditions, some experts believe that the low morbidity and mortality rates in Africa will not continue much longer.
